MEMORANDUM FOR: Special Projects Officer, OCI
ATTENTION :
FROM : Ch/MSD/PIC
SUBJECT : Requirement CI/ETA/8/59

25X1

25X1

25X1

1. A study of oblique aerial photography dated has been made to determine whether guided missile facilities exist at Iul'tin, USSR. A study of photography dated was also made, but the Iul'tin area was not discernible due to extreme obliquity of photography.

2. Iul'tin is located about 40 nautical miles inland from the Chukchi Sea at approximately 67°50'N, 178°50'W. No road or rail transportation into Iul'tin can be identified, but there are roads within the area to service housing and other facilities. There is a possible aircraft landing area nearby, but no aircraft are observed.

3. There is no apparent evidence of missile facilities in the Iul'tin area. However, scale and obliquity limit positive identification of facilities in the area. Probable mining and ore processing facilities constitute the only identifiable activity.
